APRESENTAÇÃO

Olá!

Sou o professor Rodrigo Perni e, com imensa satisfação, serei o seu analista do Passo Estratégico!

Para que você conheça um pouco sobre mim segue um resumo de nossa experiência profissional, acadêmica e como concurseiro:

Rodrigo Perni

**Auditor – Fiscal da Receita Federal do Brasil;*

** Coach do Estratégia Concursos;*

** Responsável pela elaboração e análise estatística do Passo Estratégico de Arquivologia;*

** Formado em Administração de Empresas;*

** Cursando o 4º período do curso de Direito e*

** Aprovado no concurso do ano de 2005, na 21ª posição na 2ª Região Fiscal no concurso para Auditor-Fiscal da Receita Federal do Brasil.*

Estamos extremamente felizes de termos a oportunidade de trabalhar na equipe do "Passo", porque tenho convicção de que nossos relatórios e simulados proporcionarão uma preparação diferenciada aos nossos alunos!

11225354498 - Maria Vitória Gonçalves Vieira

O QUE É O PASSO ESTRATÉGICO?

O Passo Estratégico é um material escrito e enxuto que possui dois objetivos principais:

a) orientar revisões eficientes;

b) destacar os pontos mais importantes e prováveis de serem cobrados em prova.

Assim, o Passo Estratégico pode ser utilizado tanto para turbinar as revisões dos alunos mais adiantados nas matérias, quanto para maximizar o resultado na reta final de estudos por parte dos alunos que não conseguirão estudar todo o conteúdo do curso regular.

Em ambas as formas de utilização, como regra, o aluno precisa utilizar o Passo Estratégico em conjunto com um curso regular completo.

Isso porque nossa didática é direcionada ao aluno que já possui uma base do conteúdo.

Assim, se você vai utilizar o Passo Estratégico:

a) como método de revisão, você precisará de seu curso completo para realizar as leituras indicadas no próprio Passo Estratégico, em complemento ao conteúdo entregue diretamente em nossos relatórios;

b) como material de reta final, você precisará de seu curso completo para buscar maiores esclarecimentos sobre alguns pontos do conteúdo que, em nosso relatório, foram eventualmente expostos utilizando uma didática mais avançada que a sua capacidade de compreensão, em razão do seu nível de conhecimento do assunto.

Seu cantinho de estudos famoso!

Poste uma foto do seu cantinho de estudos nos stories do Instagram e nos marque:

@passoestrategico

Vamos repostar sua foto no nosso perfil para que ele fique famoso entre milhares de concurseiros!

11225354498 - Maria Vitória Gonçalves Vieira

Análise Estatística

Inicialmente, convém destacar os percentuais de incidência das questões de Inglês nas provas elaboradas pela banca FGV

Lembrando, quanto maior o percentual de cobrança de um dado assunto, maior sua importância:

Assunto	Grau de incidência em concursos anteriores elaborados pela FGV
Interpretação de Textos (compreensão)	45%
Vocabulário e Tradução (inglês)	35%
Gramática (inglês)	20%

11225354498 - Maria Vitória Gonçalves Vieira

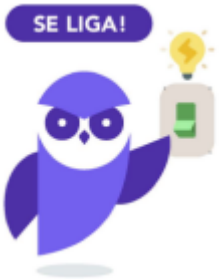

Roteiro de revisão e pontos do assunto que merecem destaque

A ideia desta seção é apresentar um roteiro para que você realize uma revisão completa do assunto e, ao mesmo tempo, destacar aspectos do conteúdo que merecem atenção.

ATENÇÃO!!! Serão disponibilizados exercícios das principais bancas que elaboram concursos públicos nos cadernos de questões ao final do curso.

1 - As **If Clauses** são formadas por duas partes: a **if clause** (que é a oração que **expressa uma condição** e por isso, é chamada de condicional) e a **main clause** (que é a **oração principal**).

2 - As frases classificadas como **Zero Conditionals** indicam **fatos verdadeiros**, que, devido a alguma coisa, **acontecerá outra com certeza**.

If I study a lot, I am approved. (Se eu estudar muito, sou aprovado.)

If you feel bad, talk to the doctor. (Se você se sentir mal, fale com o médico.)

If I win the lottery, I get rich. (Se eu ganhar na loteria, eu fico rico.)

11225354498 - Maria Vitória Gonçalves Vieira

3 - As frases classificadas como **First conditionals** indicam **possibilidades ou prováveis** ações futuras.

If you buy one of the book now, I will give you a discount. (Se você comprar o livro agora, eu te darei um desconto).

If I go to Europe, I can visit many places. (Se eu for para a Europa, eu posso visitar muitos lugares).

4 - As frases classificadas como **Second Conditionals** indicam **situações pouco prováveis** e, na maioria das vezes, irreais no futuro, já que expressa que se tivesse acontecido algo, outra coisa também teria acontecido e isso é muito hipotético, veja a estrutura e o exemplo:

If I had lots of money, I could buy a big house and a boat.

(Se eu tivesse muito dinheiro, eu poderia comprar uma casa grande e um barco).

(não tenho o dinheiro) (poderia comprar se a situação fosse diferente, é quase irreal)

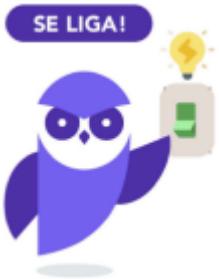

11225354498 - Maria Vitória Gonçalves Vieira

5 - As frases classificadas como **Third Conditionals**, por sua vez, indicam **algo que não ocorreu no passado** e, assim, expressa o **sentimento de arrependimento**:

If I had saved money, I would have bought lots of things in the past. (Se eu tivesse economizado dinheiro, eu teria comprado muitas coisas no passado). (não economizei) (poderia ter comprado e demonstra arrependimento)

If I had won the lottery, I would have traveled around the world. (Se eu tivesse ganhado na loteria, eu teria viajado pelo mundo.

6 - Os **determinantes (quantifiers)**, são expressões usadas para indicar **informações a respeito da quantidade** de alguma coisa. Para estudar e entender bem os tipos de quantifiers, é importante lembrar de quando estudamos os substantivos.

7 - Vejamos os quantifiers que mais aparecem nos textos das provas:

MUCH, MANY e A LOT OF

8 - **MUCH** é usado nos casos de **substantivos não-contáveis**. Example: How much sugar do you need? A few. (Quanto de açúcar você precisa? Um pouco.)

9 - **MANY** é usado nos **casos de substantives contáveis**. Example: How many students are there? Six. (Quantos estudantes estão lá? Seis.)

11225354498 - Maria Vitória Gonçalves Vieira

10 - A **LOT OF** é usado em **ambos os casos**. Example: I have a lot of things to do. Eu tenho muitas coisas para fazer.

11 - **TOO** e **SO** são usados para **intensificar algo**. A diferença é que "too" dá a impressão de exagero, às vezes com uma ideia negativa, enquanto "so" indica uma grande quantidade, sempre com ideia positiva. Examples:

There is too much traffic jam in SP. (Há congestionamento demais em SP.)

I love you so much. (Eu te amo muito.)

12 - A **BIT OF** é usado em **contextos mais informais** do que a little, que significa "um pouco de", sendo usado com substantivos incontáveis.

13 - A **FEW** significa "**poucos, alguns**", sendo usado com substantivos contáveis. Few e little possuem um sentido semântico negativo, ou seja, "algo menos do que é esperado".

Exemplos utilizando bit of, Few e little:

Patrick drank a little water yesterday. (Patrick bebeu um pouco de água ontem.)

Patrick drank a bit of water yesterday. (Patrick bebeu um pouco de água ontem.)

Patrick drank little water yesterday. (Patrick bebeu pouca água ontem.)

Lisa returned a few days ago. (Lisa voltou alguns dias atrás.)"

14 - "**ENOUGH**" se refere a **algo suficiente**, podendo ser usado tanto para substantivos contáveis como incontáveis.

There isn't enough food. (Essa comida não é suficiente/não é o bastante.)

I drove fast enough to get there in time. (Eu dirigi rápido o suficiente/ o bastante para chegar lá na hora.)

11225354498 - Maria Vitória Gonçalves Vieira

APOSTA ESTRATÉGICA

A ideia desta seção é apresentar os pontos do conteúdo que mais possuem chances de serem cobrados em prova, considerando o histórico de questões da banca em provas de nível semelhante à nossa.

Mas o que focar dentro dos temas abordados nessa aula? Qual é a aposta estratégica?

1 - As frases classificadas como **Zero Conditionals** indicam fatos verdadeiros, que, devido a alguma coisa, acontecerá outra com certeza.

If I study a lot, I am approved. (Se eu estudar muito, sou aprovado.)

2 - As frases classificadas como **First conditionals** indicam possibilidades ou prováveis ações futuras.

If you buy one of the book now, I will give you a discount. (Se você comprar o livro agora, eu te darei um desconto).

3 - As frases classificadas como **Second Conditionals i**ndicam situações pouco prováveis e, na maioria das vezes, irreais no futuro, já que expressa que se tivesse acontecido algo, outra coisa também teria acontecido e isso é muito hipotético, veja a estrutura e o exemplo:

If I had lots of money, I could buy a big house and a boat.

(Se eu tivesse muito dinheiro, eu poderia comprar uma casa grande e um barco).

4 - As frases classificadas como **Third Conditionals**, por sua vez, indicam algo que não ocorreu no passado e, assim, expressa o sentimento de arrependimento:

If I had saved money, I would have bought lots of things in the past. (Se eu tivesse economizado dinheiro, eu teria comprado muitas coisas no passado). (não economizei) (poderia ter comprado e demonstra arrependimento)

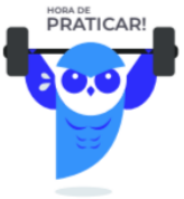

5 - Decore os **quantifiers** que mais aparecem nos textos das provas: **MUCH, MANY e A LOT OF**.

11225354498 - Maria Vitória Gonçalves Vieira

QUESTÕES ESTRATÉGICAS

Nesta seção, apresentamos e comentamos uma amostra de questões objetivas selecionadas estrategicamente: são questões com nível de dificuldade semelhante ao que você deve esperar para a sua prova e que, em conjunto, abordam os principais pontos do assunto.

A ideia, aqui, não é que você fixe o conteúdo por meio de uma bateria extensa de questões, mas que você faça uma boa revisão global do assunto a partir de, relativamente, poucas questões.

1 - (FGV - 2024 - Tecnólogo em Processamento de Dados (Pref Caraguatatuba))

Read the text and answer the question that follows it.

If AI becomes conscious: here's how researchers will know

Science fiction has long entertained the idea of artificial intelligence becoming conscious — think of HAL 9000, the supercomputer-turned-villain in the 1968 film 2001: A Space Odyssey. With the rapid progress of Artificial Intelligence (AI), that possibility is becoming less and less fantastical, and has even been acknowledged by leaders in AI. Last year, for instance, Ilya Sutskever, chief scientist at OpenAI, the company behind the chatbot ChatGPT, tweeted that some of the most cutting-edge AI networks might be "slightly conscious".

Many researchers say that AI systems aren't yet at the point of consciousness, but that the pace of AI evolution has got them pondering: how would we know if they were?

To answer this, a group of 19 neuroscientists, philosophers and computer scientists have come up with a checklist of criteria that, if met, would indicate that a system has a high chance of being conscious. They published their provisional guide earlier this week in the arXiv preprint repository, ahead of peer review. The authors undertook the effort because "it seemed like there was a real dearth of detailed, empirically grounded, thoughtful discussion of AI consciousness," says co-author Robert Long, a philosopher at the Center for AI Safety, a research non-profit organization in San Francisco, California.

The team says that a failure to identify whether an AI system has become conscious has important moral implications. If something has been labelled 'conscious', according to co-author Megan Peters, a neuroscientist at the University of California, Irvine, "that changes a lot about how we as human beings feel that entity should be treated".

11225354498 - Maria Vitória Gonçalves Vieira

Long adds that, as far as he can tell, not enough effort is being made by the companies building advanced AI systems to evaluate the models for consciousness and make plans for what to do if that happens. “And that’s in spite of the fact that, if you listen to remarks from the heads of leading labs, they do say that AI consciousness or AI sentience is something they wonder about,” he adds.

Nature reached out to two of the major technology firms involved in advancing AI — Microsoft and Google. A spokesperson for Microsoft said that the company’s development of AI is centred on assisting human productivity in a responsible way, rather than replicating human intelligence. What’s clear since the introduction of GPT-4 — the most advanced version of ChatGPT released publicly — “is that new methodologies are required to assess the capabilities of these AI models as we explore how to achieve the full potential of AI to benefit society as a whole”, the spokesperson said. Google did not respond.

Adapted from: https://www.nature.com/articles/d41586-023-02684-5

The first clause of the title indicates a(n)

A) condition.

B) concession.

C) correlation.

D) explanation.

E) gratification.

Comentários:

A resposta correta é a letra A: condição. Vamos analisar cada opção:

A: condição – A primeira parte do título "If AI becomes conscious" (Se a IA se tornar consciente) estabelece uma condição. A frase indica que algo será discutido ou acontecerá apenas se a IA atingir a consciência. O uso do termo "if" (se) sugere uma condição hipotética, tornando esta a escolha correta.

B: concessão – Concessão envolve a ideia de admitir algo ou ceder um ponto, normalmente usando termos como "although" (embora) ou "even though" (mesmo que). No entanto, o título não sugere concessão, mas uma condição.

C: correlação – Correlação refere-se a uma relação de interdependência entre dois elementos. A frase no título não sugere que haja uma relação de dependência mútua ou correlação entre a IA se tornar consciente e outra coisa.

D: explicação – Uma explicação seria introduzida por termos como "because" (porque) ou "since" (já que), indicando uma justificativa ou causa. O título não está explicando por que algo acontece, mas estabelecendo uma hipótese condicional.

11225354498 - Maria Vitória Gonçalves Vieira

E: gratificação – Gratificação refere-se à satisfação ou recompensa por algo, o que não se aplica ao contexto do título, que apenas coloca uma condição para algo ocorrer.

Portanto, a primeira parte do título indica uma condição, fazendo da opção A a correta.

Gabarito Letra A

2 - (FGV - 2023 - Auxiliar Técnico da Fiscalização (TCE SP)/Tecnologia da Informação (TI))

READ THE TEXT AND ANSWER THE FOLLOWING QUESTION:

Chatbots could be used to steal data, says cybersecurity agency

The UK's cybersecurity agency has warned that there is an increasing risk that chatbots could be manipulated by hackers.

The National Cyber Security Centre (NCSC) has said that individuals could manipulate the prompts of chatbots, which run on artificial intelligence by creating a language model and give answers to questions by users, through "prompt injection" attacks that would make them behave in an unintended manner.

The point of a chatbot is to mimic human-like conversations, which it has been trained to do through scraping large amounts of data. Commonly used in online banking or online shopping, chatbots are generally designed to handle simple requests.

Large language models, such as OpenAI's ChatGPT and Google's AI chatbot Bard, are trained using data that generates human-like responses to user prompts. Since chatbots are used to pass data to third-party applications and services, the NCSC has said that risks from malicious "prompt injection" will grow.

For instance, if a user inputs a statement or question that a language model is not familiar with, or if they find a combination of words to override the model's original script or prompts, the user can cause the model to perform unintended actions.

Such inputs could cause a chatbot to generate offensive content or reveal confidential information in a system that accepts unchecked input.

According to the NCSC, prompt injection attacks can also cause real world consequences, if systems are not designed with security. The vulnerability of chatbots and the ease with which prompts can be manipulated could cause attacks, scams and data theft. The large language models are increasingly used to pass data to third-party applications and services, meaning the risks from malicious prompt injection will grow.

The NCSC said: "Prompt injection and data poisoning attacks can be extremely difficult to detect and mitigate. However, no model exists in isolation, so what we can do is design the whole system with security in mind."

11225354498 - Maria Vitória Gonçalves Vieira

The NCSC said that cyber-attacks caused by artificial intelligence and machine learning that leaves systems vulnerable can be mitigated through designing for security and understanding the attack techniques that exploit “inherent vulnerabilities” in machine learning algorithm.

Adapted from: The Guardian, Wednesday 30 August 2023, page 4.

“If” in “if they find a combination of words” (5th paragraph) signals a:

A) contrast;

B) condition;

C) conclusion;

D) comparison;

E) consequence.

Comentários:

A resposta correta é a letra B: condição. Vamos analisar cada opção:

A: contraste – A palavra "if" (se) não indica contraste. Um exemplo de contraste seria o uso de "but" (mas) ou "however" (no entanto), que apontam ideias opostas ou contrastantes. "If" não é utilizado nesse sentido.

B: condição – A palavra "if" introduz uma condição que deve ser atendida para que algo aconteça. No caso da frase “if they find a combination of words” (se eles encontrarem uma combinação de palavras), a ação subsequente (algo inesperado acontecer) depende da realização dessa condição.

C: conclusão – "If" não indica uma conclusão, como seria o caso de "therefore" (portanto) ou "thus" (assim). Em vez disso, "if" apresenta uma hipótese ou condição, e não uma ideia final.

D: comparação – "If" também não é usado para estabelecer uma comparação, como termos como "like" (como) ou "as" (assim como) fariam.

E: consequência – Embora uma consequência possa resultar da condição apresentada por "if", o próprio "if" não expressa consequência diretamente. Termos como "so" (então) ou "therefore" (portanto) indicam consequências de forma clara.

Portanto, a palavra "if" sinaliza uma condição, tornando a opção B a resposta correta.

Gabarito Letra B

3 - (2024 - BRB Consultoria e Concurso - Prefeitura Municipal de Senhor do Bonfim (BA) - Professor Inglês (Pref Senhor do Bonfim/BA))

11225354498 - Maria Vitória Gonçalves Vieira

Which option correctly represents the first conditional?

A) If she will study hard, she passed the exam.

B) If he is going to the party, he calls me.

C) If it will rain tomorrow, we will have a picnic.

D) If they will come on time, we could start the meeting.

E) If I see him, I will tell him about the news.

Comentários:

A opção correta que representa o primeiro condicional é: "If I see him, I will tell him about the news."

Vamos analisar as frases:

A) If she will study hard, she passed the exam.
Está incorreta. O primeiro condicional requer o uso do presente simples na oração condicional e o futuro com "will" na oração principal. A forma correta seria: If she studies hard, she will pass the exam.

B) If he is going to the party, he calls me.
Está incorreta. Esta frase mistura tempos verbais errados. O primeiro condicional requer presente simples e "will" na oração principal. A forma correta seria: If he goes to the party, he will call me.

C) If it will rain tomorrow, we will have a picnic.
Está incorreta. Não se usa "will" na oração condicional (após "if"). A forma correta seria: If it rains tomorrow, we will not have a picnic.

D) If they will come on time, we could start the meeting.
Está incorreta. A estrutura do primeiro condicional requer "will" na oração principal, e não na condicional. A forma correta seria: If they come on time, we will start the meeting.

E) If I see him, I will tell him about the news.
Está correta. Segue a estrutura do primeiro condicional: presente simples na oração condicional (If I see him) e "will" na oração principal (I will tell him).

Portanto, a resposta correta é: "If I see him, I will tell him about the news."

Gabarito Letra E

Text 9A2-II

11225354498 - Maria Vitória Gonçalves Vieira

As I was driving, the snow had started falling in earnest. The light was flat, although it was midmorning, making it almost impossible to distinguish the highway. I turned on the radio to help me concentrate on the road ahead; the announcer was talking about the snow. “The state Highway department advises motorists to use extreme caution and to drive with their headlights on to ensure maximum visibility.” He went on. “The state highway supervisor just called to say that one of the plows almost hit a car because the person driving hadn’t turned on his ligths.” I checked, almost reflexively, to be sure that my headlights were on.

How can information serve those who hear or read it in making sense of their own worlds? How can it enable them to reason about what they do and to take appropriate actions based on that reasoning? My experience with the radio illustrates two different ways of providing the same message: the need to use your headlights when you drive in heavy snow. The first offers dispassionate information; the second tells the same content in a personal, compelling story. The first disguises its point of view; the second explicitly grounds the general information in a particular time and place. Each means of giving information has its role, but I believe the second is ultimately more useful in helping people make sense of what they are doing. When I heard the story about the plow, I made sure my headlights were on.

In what is written about teaching, it is rare to find accounts in which the author’s experience and point of view are central. A point of view is not simply an opinion; neither is it a whimsical or impressionistic claim. Rather, a point of view lays out what the author thinks and why. The problem is that much of what is available in professional development in languageteacher education concentrates on telling rather than on point of view. The telling is prescriptive, like the radio announcer’s first statement. It emphasizes what is important to know and do, what is current in theory and research, and therefore what you — as a practicing teacher — should do. But this telling disguises the teller; it hides the point of view that can enable you to make sense of what is told.

Donald Freeman. Series Editor’s preface. In:

P. R. Moran. Teaching culture: perspectives in practice. Boston (MA): Heinle, 2001 (adapted).

Choose the option that presents a conclusion which can be correctly drawn from the story reported by the announcer in the fragment ‘one of the plows almost hit a car because the person driving hadn’t turned on his ligths’.

A) If the car driver turned his lights, the plow wouldn’t have hit his car.

B) Had the car driver turned his lights on, the plow wouldn’t have almost hit his car.

C) The plows wouldn’t have almost hit the car, had the driver kept the car lights off.

D) There wouldn’t have been an accident with the plows if the driver had turned his lights on.

E) Had the car driver turned his lights on, there wouldn’t have been an accident.

Comentários:

11225354498 - Maria Vitória Gonçalves Vieira

A resposta correta é B) Had the car driver turned his lights on, the plow wouldn't have almost hit his car.

Essa opção está correta pois utiliza a estrutura condicional do tipo III, que é usada para falar sobre situações hipotéticas no passado, com consequências que também são imaginárias. A frase correta expressa a ideia de que se o motorista tivesse ligado os faróis, o arado (plow) não teria quase colidido com o carro.

Essa construção condicional do tipo III segue a fórmula:

- "Had + sujeito + particípio passado, sujeito + would(n't) + have + particípio passado".

As demais opções estão incorretas por apresentar erros de significado ou uso incorreto da estrutura condicional:

A) sugere uma conclusão incorreta, já que o carro quase foi atingido, não efetivamente atingido.

C) sugere que o acidente quase não ocorreu porque o motorista teria mantido os faróis desligados, o que contraria o contexto da história.

D) é incorreta, pois implica que não haveria acidente, mas o texto fala de um "quase acidente," e não de uma colisão.

E) é incorreta, pois sugere que houve um acidente, mas o texto fala de um "quase acidente."

A opção B é a única que reflete corretamente o cenário de uma quase colisão e o uso adequado do condicional.

Gabarito Letra B

5 - (AVANÇASP - 2024 - Professor (Pref Ubatuba)/Inglês)

Associate the types of conditions in English with the example sentences. Conditionals:

1 - Conditional 0 = Present Real Conditional

2 - Conditional 1 = Future Real Conditional

3 - Conditional 2 = Present Unreal Conditional

4 - Conditional 3 = Past Unreal Conditional

Sentences:

( ) "If I go to my friend's house for dinner tonight, I will take a bottle of wine or some flowers."

( ) "I would buy that computer if it were cheaper."

11225354498 - Maria Vitória Gonçalves Vieira

( ) "If I go to a friend's house for dinner, I usually take a bottle of wine or some flowers."

( ) If I had owned a car, I would have driven to work. But I didn't own one, so I took the bus.

The correct association is, respectively:

A) 2 - 4 - 3 - 1

B) 1 - 2 - 4 - 3

C) 3 - 4 - 1 - 2

D) 4 - 2 - 1 - 3

E) 2 - 3 - 1 - 4

Comentários:

A associação correta entre os tipos de condições em inglês e as frases fornecidas é E: 2 - 3 - 1 - 4.

Vamos analisar cada frase e seu tipo correspondente:

1. "If I go to my friend's house for dinner tonight, I will take a bottle of wine or some flowers."

Tipo: Conditional 1 (Future Real Conditional). Este tipo é usado para situações que podem acontecer no futuro.

2. "I would buy that computer if it were cheaper."

Tipo: Conditional 2 (Present Unreal Conditional). Este tipo é usado para situações hipotéticas no presente ou futuro que são improváveis.

3. "If I go to a friend's house for dinner, I usually take a bottle of wine or some flowers."

Tipo: Conditional 0 (Present Real Conditional). Este tipo é usado para situações que são sempre verdadeiras ou fatos gerais.

4. "If I had owned a car, I would have driven to work. But I didn't own one, so I took the bus."

Tipo: Conditional 3 (Past Unreal Conditional). Este tipo é usado para situações hipotéticas no passado que não aconteceram.

Portanto, a associação correta é:

- 1 - Conditional 1
- 2 - Conditional 2
- 3 - Conditional 0
- 4 - Conditional 3

11225354498 - Maria Vitória Gonçalves Vieira

Resposta: E: 2 - 3 - 1 - 4.

Gabarito Letra E

6 - (2023 - AVANÇASP - Prefeitura Municipal de Juquitiba (SP) - Professor de Educação Básica II - Inglês (Pref Juquitiba/SP))

Mark the option that presents the correct structure of the third conditional.

A) If it rains tomorrow, we will stay indoors.

B) If I had a car, I would drive to work.

C) If water reaches 100 degrees Celsius, it boils.

D) If I were, I would go to that party.

E) If she had studied harder, she would have passed the exam.

Comentários:

A resposta correta é a letra E: If she had studied harder, she would have passed the exam.

Vamos comentar cada opção:

A: If it rains tomorrow, we will stay indoors.
Essa frase está no primeiro condicional, que é usado para falar sobre situações reais ou possíveis no futuro. A estrutura é: If + presente simples, will + verbo.

B: If I had a car, I would drive to work.
Essa frase está no segundo condicional, que é usado para falar sobre situações hipotéticas no presente ou futuro. A estrutura é: If + passado simples, would + verbo.

C: If water reaches 100 degrees Celsius, it boils.
Essa frase é um exemplo de zero condicional, que é usado para falar de fatos científicos ou verdades gerais. A estrutura é: If + presente simples, presente simples.

D: If I were, I would go to that party.
Essa frase está incorreta porque falta o complemento para o verbo "were". Além disso, ela estaria no segundo condicional, e não no terceiro.

E: If she had studied harder, she would have passed the exam.
Esta é a estrutura correta do terceiro condicional, usado para falar de situações hipotéticas no passado que não aconteceram. A estrutura é: If + passado perfeito (had + particípio), would have + particípio.

Portanto, a opção E apresenta a estrutura correta do terceiro condicional.

11225354498 - Maria Vitória Gonçalves Vieira

Gabarito Letra E

7 - (2022 - FUNDATEC - Prefeitura Municipal de Restinga Sêca (RS) - Professor de Língua Inglesa (Pref Restinga Sêca/RS))

What is the internet of things?

In the internet of things (IoT), a “thing” can be __ person with a heart monitor implant, __ animal with a biochip transponder, __ car with sensors to alert when tire pressure is low, or any object that is able to transfer data. IoT is __ system of interrelated “things” that are provided with __ ability to transfer information over a network without requiring human interaction. It uses artificial intelligence and machine learning to improve data collecting, and sometimes devices can even communicate with each other and then act on __ information they get.

In agriculture, IoT-based smart farming systems can help monitor light, temperature, humidity, and soil moisture of crop fields; automatize irrigation systems, and collect data on rainfall and soil content. The infrastructure industry can benefit from sensors that monitor events or changes within structural buildings and bridges. To healthcare, IoT offers the ability to monitor patients more closely using an analysis of the data that's generated.

Smart homes are equipped with smart thermostats, appliances, and connected heating, lighting, and electronic devices that can be controlled remotely via smartphones. Smart buildings can reduce energy costs using sensors that detect how many occupants are in a room and then adjust the temperature automatically. Wearable devices with sensors can be used for public safety, for example, by providing optimized routes to a location where there is an emergency, or by tracking firefighters' vital signs at life-threatening sites.

Obviously, there are some disadvantages, too, and the list includes the risk that confidential information is stolen by hackers, and the difficulty for devices from different manufacturers to communicate with each other since there's no international standard of compatibility for IoT. Companies may have to deal with massive numbers, and collecting and managing the data from all those devices will be challenging. Ultimately, if there's a bug in the system, it's likely that every connected device will become corrupted.

"Pros and cons in perspective, Matthew Evans, the IoT program head at techUK, says that In the short term, we know [IoT] will impact on anything where there is a high cost of not

intervening, Evans said. ""And it’ll be for simpler day-to-day issues – like finding a car parking space in busy areas, linking up your home entertainment system, and using your fridge webcam to check if you need more milk on the way home.”"

(Available in: from: https://www.techtarget.com/iotagenda/definition/Internet-of-Things-IoT https://www.wired.co.uk/article/internet-of-things-what-is-explained-iot – text especially adapted for this test).

Consider the statements about the excerpt “If there's a bug in the system, it's likely that every connected device will become corrupted”:

11225354498 - Maria Vitória Gonçalves Vieira

I. If we change the order to “It's likely that every connected device will become corrupted if there's a bug in the system” the sentence becomes ungrammatical.

II. The word “If” can be substituted by “In case” with no significative changes in meaning.

III. This is a first conditional sentence, which means there is a high probability that this really happens.

Which statements are correct?

A) Only I.

B) Only II.

C) Only III.

D) Only II and III.

E) I, II, and III.

Comentários:

A resposta correta é E) I, II, and III.

Vamos rever cada afirmação com base no gabarito:

I. If we change the order to “It's likely that every connected device will become corrupted if there's a bug in the system” the sentence becomes ungrammatical.
Essa afirmação está correta de acordo com o gabarito. Isso ocorre porque, ao alterar a ordem, a fluidez natural da frase pode ser comprometida, especialmente com a inserção da oração condicional no final. Embora a frase continue gramaticalmente correta, essa inversão pode alterar o estilo e a clareza.

II. The word “If” can be substituted by “In case” with no significative changes in meaning.
Essa afirmação está correta. "If" e "in case" podem ser usados de forma intercambiável em muitos contextos sem alteração significativa de sentido, embora "in case" tenha uma leve conotação de prevenção.

III. This is a first conditional sentence, which means there is a high probability that this really happens.
Essa afirmação está correta. A sentença segue a estrutura do primeiro condicional, que expressa situações possíveis ou prováveis no futuro, indicando que, se ocorrer um erro no sistema, há uma alta probabilidade de que os dispositivos conectados sejam corrompidos.

Portanto, todas as três afirmações estão corretas, justificando a resposta E) I, II, and III.

Gabarito Letra E

11225354498 - Maria Vitória Gonçalves Vieira

8 - (2022 - CESGRANRIO - Eletrobrás Termonuclear - Especialista em Proteção Radiológica (ELETRONUCLEAR))

U.S. domestic air conditioning use could exceed electric capacity in next decade due to climate change

1 - Climate change will provoke an increase in summer air conditioning use in the United States that will probably cause prolonged blackouts during peak summer heat if states do not expand capacity or improve efficiency, according to a new study of domestic-level demand.

2 - Human emissions have put the global climate on a trajectory to exceed 1.5 degrees Celsius of warming by the early 2030s, the IPCC reported in its 2021 evaluation. Without significant alleviation, global temperatures will probably exceed the 2.0-degree Celsius limit by the end of the century.

3 - Previous research has examined the impacts of higher future temperatures on annual electricity consumption for specific cities or states. The new study is the first to project residential air conditioning demand on a domestic basis at a wide scale. It incorporates observed and predicted air temperature and heat, humidity and discomfort indices with air conditioning use by statistically representative domiciles across the contiguous United States, collected by the U.S. Energy Information Administration (EIA) in 2005- 2019.

4 - "It's a pretty clear warning to all of us that we can't keep doing what we are doing or our energy system will fail completely in the next few decades, simply because of the summertime air conditioning," said Susanne Benz, a geographer and climate scientist at Dalhousie University in Halifax, Nova Scotia.

5 - The heaviest air conditioning use with the greatest risk for overcharging the transmission lines comes during heat waves, which also present the highest risk to health. Electricity generation tends to be below peak during heat waves as well, reducing capacity to even lower levels, said Renee Obringer, an environmental engineer at Penn State University. Without enough capacity to satisfy demand, energy companies may have to adopt systematic blackouts during heat waves to avoid network failure, like California's energy organizations did in August 2020 during an extended period of record heat sometimes topping 117 degrees Fahrenheit. "We've seen this in California already -- state power companies had to institute blackouts because they couldn't provide the needed electricity," Obringer said. The state attributed 599 deaths to the heat, but the true number may have been closer to 3,900.

6 - The new study predicted the largest increases in kilowatt-hours of electricity demand in the already hot south and southwest. If all Arizona houses were to increase air conditioning use by the estimated 6% needed at 1.5 degrees Celsius of global warming, for example, amounting to 30 kilowatt-hours per month, this would place an additional 54.5 million kilowatthours of demand on the electrical network monthly.

Available at: www.sciencedaily.com/releases/2022/02/ 220204093124.htm. Retrieved on: Feb. 9, 2022. Adapted.

11225354498 - Maria Vitória Gonçalves Vieira

In the fragment of paragraph 6 “If all Arizona houses were to increase air conditioning use”, if signals a(n)

A) condition

B) opposition

C) negation

D) conclusion

E) explanation

Comentários:

A resposta correta é A) condition.

No fragmento da frase "If all Arizona houses were to increase air conditioning use", a palavra "If" indica uma condição. Essa estrutura condicional está projetando uma situação hipotética em que todas as casas do Arizona aumentariam o uso de ar-condicionado. O uso de "If" introduz uma suposição que dependerá de um fator condicional para ocorrer, o que é típico da formação de orações condicionais.

As demais opções podem ser explicadas da seguinte forma:

B) opposition: Refere-se a uma ideia oposta ou contraste, o que não é o caso aqui.

C) negation: Implica em negação de uma ideia, o que não é o foco da frase.

D) conclusion: Indica uma conclusão lógica, o que também não se aplica neste contexto.

E) explanation: Refere-se a uma explicação de algo já mencionado, mas aqui estamos lidando com uma condição hipotética, não uma explicação.

Portanto, a palavra "If" introduz uma condição, justificando a escolha da opção A) condition.

The tyranny of passwords – is it time for a rethink?

They are elusive, infuriating gatekeepers that rule our lives. Easy to crack and hard to remember, forgetting them is pricey – it cost Stefan Thomas £160m in lost bitcoin

Sirin Kale

Sun 31 Jan 2021

11225354498 - Maria Vitória Gonçalves Vieira

Modern life is the act of entering the third character of a long-dead family pet into an online form three times a week, getting it wrong, and speaking to a call-centre worker in India whose real name is almost certainly not Kenny, ad infinitum, until you die. Our ancestors lived short, brutish lives and died in childbirth, or were gored to death on the battlefield, but at least they didn't have passwords, and that's something.

The tyranny of passwords; it colonizes modern life. These petty dictators deny us access to our bank accounts, our baby photos, our phone contracts, even our heating. They reproduce as endlessly as bacteria, and yet, like Tupperware lids, you can never find the one you need. They are our boyfriends, our girlfriends, our children, our pets. A talented and motivated adversary could probably work yours out in the time it has taken you to read this paragraph.

Most of the time, not being able to remember your password is merely irritating. But sometimes, password amnesia can be life-altering. After going public with his account of losing the password to around $220m (£161m) worth of bitcoin, German programmer Stefan Thomas, 33, sparked a conversation around passwords, loss, and how you grieve a fortune you'll never get back.

Thomas had three copies of his bitcoin passwords saved on hard drives and a USB stick, but the first two versions failed due to software updates, and the USB stick is password protected. If Thomas enters the password incorrectly 10 times, the data wipes. He has two attempts left, and he can't remember the password. When we speak, Thomas is remarkably sanguine. "There are some days where I'm almost grateful for it," he says cheerfully.

"There were weeks where I would lie in bed, looking at the ceiling, just completely desperate," he says. "I'd spend hours trying to think of ways to recover the data, jump up, run to my computer and try it and then it wouldn't work, so I'd go back to staring at my ceiling." Eventually, he decided: enough. He climbed out of bed, and forged a career in technology, before founding his own company, Coil.

Not everyone can move on from such a wringing loss. "I'm coming up against a brick wall," says James Howells, his voice rising. "They don't even want to have a conversation with me about it! Which is so silly, given the valuation." He is referring to Newport city council, owner and operator of the rubbish tip into which he accidentally slung a hard drive containing the key to the bitcoins he'd mined in 2009.

The bitcoins are now worth £210m, and the 35-year-old cryptocurrency trader from Newport is so desperate to get them back he's offered 25% of his haul, or £50m, to Newport city council. The council has declined Howells's offer repeatedly over the past eight years, due to the cost.

As gently as possible, I ask if it might be better to let this go? "I'm just looking for an opportunity to search for what belongs to me," he says, sounding wretched. "And I am willing to share it. But it's hard to accept it's gone without being given the opportunity to search. Knowing the hard drive's there, and there's still a chance."

We lose things; we forget. It is in our nature, it's what makes us human. "The art of losing isn't hard to master," observed Elizabeth Bishop in her poem One Art. Life is a continual surrendering to loss. Some fare better than others: for every Thomas, there is a Howells. "Lose something

11225354498 - Maria Vitória Gonçalves Vieira

every day," Bishop writes, and we oblige her. We lose coats, books, bags, phones, friends, money, loved ones, mobility and eventually, ourselves. Most of all, we forget our passwords. The average person has close to 80 passwords, hardly any of which they remember.

(…)

Because passwords are tedious, humans are very bad at them. "There are literally billions of passwords breached every year," says Gerald Beuchelt of the password manager LastPass. "It's a total epidemic. It's happening on a daily basis." A Google/Harris poll from 2019 found that 52% of people reuse their passwords across multiple accounts, which is very bad security practice.

"The best password is a random password," says password researcher professor Lorrie Cranor of Carnegie Mellon University. "But people aren't good at generating random passwords or remembering them." Almost everything you intuitively believe about passwords is not correct. "If you struggle to remember your passwords," Cranor says, "write them in a notebook and hide it at home. It's highly unlikely that a hacker is going to get access to your house."

(…)

Our passwords reveal a humanity that is much more shared than we think. "We all think alike," says Cranor, "and we all do similar things, in creating passwords. People think they are being smart by going diagonally on the keyboard," Cranor says. "But it's in all the hacker dictionaries." John used to play a game where she'd ask her friends five questions, before guessing their passwords. "I'd ask them their parents', siblings' and children's names, anniversaries and birthdays, their pet's name, and their favourite sporting team," she says. "I'd usually get 70% of them right."

We would not leave the door to our house open and yet many of us leave our digital accounts vulnerable to cybercriminals every day, because of our laissez-faire attitude to password security. Sometimes, criminals access accounts using personal information a person has shared online, or matching passwords from previous data breaches but, increasingly, hackers also use brute-force software – programmes which match thousands of dictionary words until something fits. "You can brute force most eight character passwords within 10 minutes," says Beuchelt.

(…)

There is a solution to all this chaos and confusion: a password manager. "These are apps or small pieces of software," says Beuchelt, "that store all your different usernames and passwords in secure vaults." A password manager like LastPass (Google also has a version) will randomly generate impenetrable passwords for all your various accounts and store them for you. "All users need to do is remember your master password," says Beuchelt, "and LastPass remembers the rest." It's the equivalent of having a book in your house, with all your passwords written in it – only digital and highly secure.

Of course, your master password needs to be extremely strong: LastPass recommends a minimum of 12 characters, but the longer the better. A long passphrase, composed of random words, numbers and symbols, that is pronounceable – meaning you're likely to remember it – but doesn't

11225354498 - Maria Vitória Gonçalves Vieira

use personal information, works best. LastPass doesn't store its users' passwords centrally, meaning that even if hackers were able to get into their internal systems they wouldn't be able to break into accounts. "That gives users the highest degree of security you can get," says Beuchelt.

(...)

From: < https://www.theguardian.com/technology/2021/jan/31/the-tyranny-of-passwords-is-it-time-for-a-rethink>. Acess: January 31, 2021.

Subordination is very often marked by some feature in the internal structure of the clause. The alternative that brings a subordination idea expressed in it is:

A) If Thomas enters the password incorrectly 10 times, the data wipes.

B) These petty dictators deny us access to our bank accounts.

C) People aren't good at generating random passwords or remembering them.

D) That gives users the highest degree of security you can get.

E) You can brute force most eight character passwords within 10 minutes.

Comentários:

A resposta correta é A) If Thomas enters the password incorrectly 10 times, the data wipes.

A subordinação ocorre quando uma oração depende de outra para que seu sentido esteja completo. A estrutura condicional introduzida pela palavra "If" (Se) no exemplo "If Thomas enters the password incorrectly 10 times, the data wipes" expressa uma relação de dependência entre as duas partes da frase: se Thomas errar a senha 10 vezes, então os dados serão apagados. A oração subordinada (aquela que começa com "If") depende da principal para formar uma ideia completa.

As outras alternativas não apresentam essa estrutura de dependência clara:

B) é uma afirmação independente sobre o funcionamento das senhas.

C) é uma afirmação genérica sobre a habilidade das pessoas em criar senhas.

D) apresenta uma afirmação com "that," mas a oração não depende de outra para ser compreendida.

E) é uma afirmação direta sobre o tempo que leva para quebrar uma senha, sem subordinação.

Portanto, a alternativa que contém uma ideia de subordinação é a A.

TEXT:

What is Validity?

by Evelina Galaczi

July 17th, 2020

The fundamental concept to keep in mind when creating any assessment is validity. Validity refers to whether a test measures what it aims to measure. For example, a valid driving test should include a practical driving component and not just a theoretical test of the rules of driving. A valid language test for university entry, for example, should include tasks that are representative of at least some aspects of what actually happens in university settings, such as listening to lectures, giving presentations, engaging in tutorials, writing essays, and reading texts.

Validity has different elements, which we are now going to look at in turn.

Test Purpose – Why am I testing?

We can never really say that a test is valid or not valid. Instead, we can say that a test is valid for a particular purpose. There are several reasons why you might want to test your students. You could be trying to check their learning at the end of a unit, or trying to understand what they know and don't know. Or, you might want to use a test to place learners into groups based on their ability, or to provide test takers with a certificate of language proficiency. Each of these different reasons for testing represents a different test purpose.

The purpose of the test determines the type of test you're going to produce, which in turn affects the kinds of tasks you're going to choose, the number of test items, the length of the test, and so on. For example, a test certifying that doctors can practise in an English-speaking country would be different from a placement test which aims to place those doctors into language courses.

Test Takers – Who am I testing?

It's also vital to keep in mind who is taking your test. Is it primary school children or teenagers or adults? Or is it airline pilots or doctors or engineers? This is an important question because the test has to be appropriate for the test takers it is aimed for. If your test takers are primary school children, for instance, you might want to give them more interactive tasks or games to test their language ability. If you are testing listening skills, for example, you might want to use role plays for doctors, but lectures or monologues with university students.

Test Construct – What am I testing?

Another key point is to consider what you want to test. Before designing a test, you need to identify the ability or skill that the test is designed to measure – in technical terms, the 'test construct'. Some examples of constructs are: intelligence, personality, anxiety, English language ability, pronunciation. To take language assessment as an example, the test construct could be communicative language ability, or speaking ability, or perhaps even a construct as specific as pronunciation. The challenge is to define the construct and find ways to elicit it and measure it;

11225354498 - Maria Vitória Gonçalves Vieira

for example, if we are testing the construct of fluency, we might consider features such as rate of speech, number of pauses/ hesitations and the extent to which any pauses/hesitations cause strain for a listener.

Test Tasks – How am I testing?

Once you've defined what you want to test, you need to decide how you're going to test it. The focus here is on selecting the right test tasks for the ability (i.e. construct) you're interested in testing. All task types have advantages and limitations and so it's important to use a range of tasks in order to minimize their individual limitations and optimize the measurement of the ability you're interested in. The tasks in a test are like a menu of options that are available to choose from, and you must be sure to choose the right task or the right range of tasks for the ability you're trying to measure.

Test Reliability - How am I scoring?

Next it's important to consider how to score your test. A test needs to be reliable and to produce accurate scores. So, you'll need to make sure that the scores from a test reflect a learner's actual ability. In deciding how to score a test, you'll need to consider whether the answers are going to be scored as correct or incorrect (this might be the case for multiple–choice tasks, for example) or whether you might use a range of marks and give partial credit, as for example, in reading or listening comprehension questions. In speaking and writing, you'll also have to decide what criteria to use (for example, grammar, vocabulary, pronunciation, essay, organisation in writing, and so on). You'll also need to make sure that the teachers involved in speaking or writing assessment have received some training, so that they are marking to (more or less) the same standard.

Test Impact - How will my test help learners?

The final – and in many ways most important – question to ask yourself is how the test is benefitting learners. Good tests engage learners in situations similar to ones that they might face outside the classroom (i.e. authentic tasks), or which provide useful feedback or help their language development by focusing on all four skills (reading, listening, writing, speaking). For example, if a test has a speaking component, this will encourage speaking practice in the classroom. And if that speaking test includes both language production (e.g. describe a picture) and interaction (e.g. discuss a topic with another student), then preparing for the test encourages the use of a wide range of speaking activities in the classroom and enhances learning.

A oração condicional "If you are testing listening skills, for example, you might want to use role plays for doctors, but lectures or monologues with university students." classifica-se como:

A) present and future unreal conditional

B) present real conditional

C) past unreal conditional

11225354498 - Maria Vitória Gonçalves Vieira

D) future real conditional

Comentários:

A oração condicional “If you are testing listening skills, for example, you might want to use role plays for doctors, but lectures or monologues with university students.” classifica-se como B: present real conditional.

Justificativa:

Present Real Conditional: Este tipo de condicional é utilizado para expressar situações que são reais ou possíveis no presente. A estrutura típica é "If + present simple, ...".

Na frase em questão:

“If you are testing listening skills” (a condição) é uma situação que pode acontecer no presente, pois refere-se a uma ação que pode ser realizada atualmente.

“you might want to use role plays for doctors” (a consequência) é uma sugestão que também se aplica a situações reais ou possíveis no presente.

Essa classificação é importante no contexto de avaliação, pois a habilidade de criar e interpretar diferentes tipos de condicionais é fundamental para entender as nuances na comunicação, especialmente em contextos acadêmicos ou profissionais. O uso do condicional real ajuda a transmitir ideias práticas e aplicáveis, facilitando a comunicação de estratégias de ensino e avaliação.

Vamos analisar as demais opções de classificação da oração condicional apresentada:

A) Present and Future Unreal Conditional

Justificativa: O "unreal conditional" se refere a situações hipotéticas ou irreais. A frase não expressa uma situação que é contrária à realidade presente ou futura, mas sim uma possibilidade real. Portanto, esta opção não se aplica.

C) Past Unreal Conditional

Justificativa: O "past unreal conditional" é utilizado para descrever situações que não ocorreram no passado e que são irreais. A estrutura típica é "If + past perfect, ... would/could/might + have + past participle". Como a frase fala sobre uma condição que pode ser verdadeira no presente, esta classificação é inadequada.

D) Future Real Conditional

Justificativa: O "future real conditional" é utilizado para descrever situações que ocorrerão no futuro se uma condição for atendida. A estrutura típica é "If + present simple, ... will + base form". Embora a frase mencione uma possibilidade futura (a ideia de usar diferentes métodos de

11225354498 - Maria Vitória Gonçalves Vieira

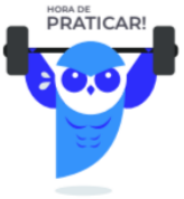

teste), a condição apresentada não se refere a um evento futuro específico, mas sim a uma possibilidade presente. Por isso, essa opção também não é corret

QUESTIONÁRIO DE REVISÃO E APERFEIÇOAMENTO

Nesta seção, apresentamos e comentamos uma amostra de questões objetivas selecionadas estrategicamente: são questões com nível de dificuldade semelhante ao que você deve esperar para a sua prova e que, em conjunto, abordam os principais pontos do assunto.

A ideia, aqui, não é que você fixe o conteúdo por meio de uma bateria extensa de questões, mas que você faça uma boa revisão global do assunto a partir de, relativamente, poucas questões.

Perguntas

1. Escreva uma frase utilizando uma frase classificada como Zero Conditionals.

2. Escreva uma frase utilizando uma frase classificada como First Conditionals.

3. Escreva uma frase utilizando uma frase classificada como Second Conditionals

4. Escreva uma frase utilizando uma frase classificada como Third Conditionals

5. Escreva uma frase utilizando TOO.

6. Escreva uma frase utilizando o SO.

7. Escreva uma frase utilizando MUCH.

8. Escreva uma frase utilizando MANY.

9. Escreva uma frase utilizando A LOT OF.

11225354498 - Maria Vitória Gonçalves Vieira

Perguntas com respostas

1. Escreva uma frase utilizando uma frase classificada como Zero Conditionals.

R: If I study a lot, I am approved.

2 - Escreva uma frase utilizando uma frase classificada como First conditionals

R: If you buy one of the book now, I will give you a discount.

3. Escreva uma frase utilizando uma frase classificada como Second Conditionals

R: If I had lots of money, I could buy a big house and a boat.

4. Escreva uma frase utilizando uma frase classificada como Third Conditionals

R: If I had saved money, I would have bought lots of things in the past.

5. Escreva uma frase utilizando TOO.

R: There is too much traffic jam in SP.

6. Escreva uma frase utilizando o SO.

R: I love you so much.

7. Escreva uma frase utilizando MUCH.

R:How much sugar do you need? A few.

8. Escreva uma frase utilizando MANY.

R: How many students are there? Six.

9. Escreva uma frase utilizando A LOT OF.

R: I have a lot of things to do.

Lista de Questões Estratégica

1 - (FUNDATEC/2011 – CÂMARA MUNICIPAL DE PORTO ALEGRE – RS)

Could a Clone Ever Run for President?

Dolly is out, but how about "All the way with a cloned L.B.J."?

Sure, why not? Scientists used to think it would be difficult to clone an animal as complex as a mammal, but Dolly the sheep neatly demolished that theory. If you can clone a sheep, a human isn't much tougher. Whether it is ethical to do so is another matter, and in fact human cloning has been outlawed in a number of countries and states. But illegal or not, someone is going to do it – and having been conceived …… a convicted felon is no bar to public office.

The U.S. Constitution, moreover, doesn't have a clone clause. As long as you are a citizen and 35 or older, you're eligible. The age requirement means it can't happen ……. a while – 2036 at the earliest (presuming that someone hasn't already secretly created the first human clone). But 2036 is not that far away. While some may insist that a clone should not be eligible for citizenship, the argument won't fly. If you are human and born in the U.S., you're a citizen. A clone will be born in the conventional way, with a mother, a belly button, and a full complement of human DNA.

The obstacle to President Clone will come if cloning carries serious side effects. Dolly the sheep, it turns out, has prematurely aged cells, probably attributable ……. the fact that she is the biological extension of an animal that was already an adult. Human clones could have the same problem – plus cloning-related mental or behavioral defects that might not be apparent in a sheep.

If these difficulties could be _____ political campaigns could get pretty interesting. Biologists today are talking of using cloning to bring the wooly mammoth and other extinct animals back to life. Maybe Democrats and Republicans would want to try something similar. After all, candidates are always trying to link themselves to great leader of the past. Why not cut out the middlemen? Given the pace of scientific progress, plus sufficiently audacious party leaders, the presidential debates of 2044 could feature some pretty impressive lineups. Imagine Abraham Lincoln talking on F.D.R. or J.F.K. going up against Thomas Jefferson. Or Millard Fillmore vs. Warren Harding.

On second thought …

(Reprinted from Time, "Could a Clone Ever Run for President?"By Michael D. Lemonick, 2001)

Choose the correct option to fill in the period bellow:

If Dolly _____ alive, she _____ very popular.

(A) was – was

(B) was – was going to be

(C) was – would be

(D) were – would be

(E) were – were going to be

2 - (FUNDATEC/2022 – PREFEITURA MUNICIPAL DE RESTINGA SÊCA – RS)

What is the internet of things?

In the internet of things (IoT), a “thing” can be __ person with a heart monitor implant, __ animal with a biochip transponder, __ car with sensors to alert when tire pressure is low, or any object that is able to transfer data. IoT is __ system of interrelated “things” that are provided with __ ability to transfer information over a network without requiring human interaction. It uses artificial intelligence and machine learning to improve data collecting, and sometimes devices can even communicate with each other and then act on __ information they get.

In agriculture, IoT-based smart farming systems can help monitor light, temperature, humidity, and soil moisture of crop fields; automatize irrigation systems, and collect data on rainfall and soil content. The infrastructure industry can benefit from sensors that monitor events or changes within structural buildings and bridges. To healthcare, IoT offers the ability to monitor patients more closely using an analysis of the data that's generated.

Smart homes are equipped with smart thermostats, appliances, and connected heating, lighting, and electronic devices that can be controlled remotely via smartphones. Smart buildings can reduce energy costs using sensors that detect how many occupants are in a room and then adjust the temperature automatically. Wearable devices with sensors can be used for public safety, for example, by providing optimized routes to a location where there is an emergency, or by tracking firefighters' vital signs at life-threatening sites.

Obviously, there are some disadvantages, too, and the list includes the risk that confidential information is stolen by hackers, and the difficulty for devices from different manufacturers to communicate with each other since there's no international standard of compatibility for IoT.

Companies may have to deal with massive numbers, and collecting and managing the data from all those devices will be challenging. Ultimately, if there's a bug in the system, it's likely that every connected device will become corrupted.

"Pros and cons in perspective, Matthew Evans, the IoT program head at techUK, says that In the short term, we know [IoT] will impact on anything where there is a high cost of not intervening, Evans said. ""And it’ll be for simpler day-to-day issues – like finding a car parking space in busy areas, linking up your home entertainment system, and using your fridge webcam to check if you need more milk on the way home.”

11225354498 - Maria Vitória Gonçalves Vieira

(Available in: from: https://www.techtarget.com/iotagenda/definition/Internet-of-Things-IoT https://www.wired.co.uk/article/internet-of-things-what-is-explained-iot – text especially adapted for this test).

Consider the statements about the excerpt "If there's a bug in the system, it's likely that every connected device will become corrupted":

I. If we change the order to "It's likely that every connected device will become corrupted if there's a bug in the system" the sentence becomes ungrammatical.

II. The word "If" can be substituted by "In case" with no significative changes in meaning.

III. This is a first conditional sentence, which means there is a high probability that this really happens.

Which statements are correct?

(A) Only I.

(B) Only II.

(C) Only III.

(D) Only II and III.

(E) I, II, and III.

3 - (FUNDATEC/2019 – PREFEITURA MUNICIPAL DE SALTO DO JACUÍ – RS) Is Ikigai The New Hygge? The Japanese Concept Of Finding Purpose In Our Lives We've snuggled up in a comfortable knitted sweaters and filled our rooms with wood-scented candles in the pursuit of hygge – the Danish concept of finding contentment in _____. When that didn't work, we turned to the Swedish idea of lagom, or moderate living, and it turns out we're still not happy. So maybe it's ikigai, the lifestyle concept from Japan, that will help us live our best lives.

In some ways, Ikigai is the antithesis of hygge. Instead of encouraging us to slow down, it's about find striving to find purpose in life, or raison d'etre to use a French equivalent. As such, it is a notion often adopted by those unhappy at work or who have retired. The word is composed in Japanese using the characters iki, or life, and kai, meaning the result of a certain action," explains Hector Garcia, the co-author of Ikigai: The Japanese Secret to a Long and Happy Life.

This all sounds rather fluffy. But studies show that losing one's purpose can have a detrimental effect. For instance, those who lose their raison d'etre when they retire become more prone to contracting _____. But Ikigai isn't an individualistic concept either focused on self preservation. The social connections that we form are as important as any sense of inner peace, according to Remedios, of the Hyper Japan cultural festival.

11225354498 - Maria Vitória Gonçalves Vieira

Now we're convinced to try it, how does one go about finding their ikigai? "Flow" is the first step, says Garcia. "When we enter a state of 'flow' we lose the sense of time passing. Have you ever been so absorbed in a task that you forget to drink and eat? What type of task was it? Notice those moments when you enter flow, and your ikigai might be embeded in those moments. If you increase the daily time at flow you will increase your connection with your ikigai. "Your Ikigai is at the intersection of what you are good at and what you love doing."

Since incorporating the ideas of ikigai into his life, Garcia says he has become better at appreciating and understanding what he finds joy in. "I stop several times through the day and I ask myself: why am I doing this?". Which, frankly, sounds exhausting. But Garcia stresses that "noticing is only the first step." The next is implementing changes - and this is where most of us trip up.

Still, it's hard not to feel that ikigai – like hygge and lagom – Is another sticking plaster we've reached for to help patch over the problems in our lives that run deeper than any buzzword word can solve. "Although the words might be new, I think all the concepts are not really new," says the spokesperson for HyperJapan.

"Just as humans have lusted after objects and money since the dawn of time, other humans have felt dissatisfaction at the _____ pursuit of money and fame and have instead focused on something bigger than their own material wealth. This has over the years been described using many different words and practices, but always hearkening back to the central core of meaningfulness in life."

Consider the sentence "If you increase the daily time at flow you will increase your connection with your ikigai" and the following assertives:

I. It is an example of the zero conditional.

II. It is used to talk about imaginary situations in the past.

III. The third conditional would be "If you had increased the daily time at flow you would increase your connection with your ikigai".

Which ones are INCORRECT?

(A) Only I.

(B) Only II.

(C) Only III

11225354498 - Maria Vitória Gonçalves Vieira

(D) Only I and III.

(E) I, II and III.

Shark-Spotting And Sea Rescue Goes High-Tech In Australia

Shark surveillance and sea rescue just got more sophisticated.

A drone that can detect the aquatic beasts from the sky and drop down rescue pods to swimmers in distress will be deployed above coastlines as part of a trial in New South Wales, Australia.

The $180,000 unmanned aerial vehicle, dubbed the "Little Ripper," will come equipped with a high-definition camera. The footage can be monitored from the ground, saving the costly expense of sending a helicopter into the air.

Scientists are also working on a software algorithm that will identify the kind of shark in the water, which can then be relayed immediately to emergency services, lifeguards and swimmers.

The drone's rescue pod is adaptable to environmental conditions. According to the Sydney Morning Herald, the marine version contains a life raft, locator beacon, shark repellent and medical equipment. It can also be used for land and snow emergencies.

The trial of the battery-powered, military-grade Vapor 55 drone was launched at the Westpac Lifesaver Helicopter Base in Sydney on Sunday. It will initially patrol the coastlines of Newcastle, Hawkes Nest and Byron Bay in northern New South Wales, Mashable reported.

Fourteen people were attacked by sharks in the area in 2015. There was one fatality.

NSW Premier Mike Baird said that if the trial proved a success, then every surf club in the state will have access to the technology.

"Every now and then the future crashes in on today and I think this is one of those days," Baird said.

Paul Scully-Power, Australia's first astronaut, and philanthropist/founding president of the International Life Saving Federation Kevin Weldon developed the drone with Australian company Skyline. The trial was scheduled four months after the NSW government unveiled a $11.4 million program to combat shark attacks, via the drone and 4G listening stations.

Consider the sentence: "NSW Premier Mike Baird said that if the trial proved a success, then every surf club in the state will have access to the technology." (l. 17-18). The underlined clause it is:

(A) A defining relative clause.

(B) A non-defining relative clause.

(C) A sentencial relative clause.

(D) An infinitive clause.

(E) A conditional clause.

Press me! The button that lies to you

The tube pulls in to a busy station along the London Underground's Central Line. It is early evening on a Thursday. A gaggle of commuters assembles inside and outside the train, waiting for the doors to open. A moment of impatience grips one man who is nearest to them. He pushes the square, green-rimmed button which says "open". A second later, the doors satisfyingly part. The crowds mingle, jostling on and off the train, and their journeys continue. Yet whether or not the traveller knew it, his finger had no effect on the mechanism.

Some would call this a "placebo button"– a button which, objectively speaking, provides no control over a system, but which to the user at least is psychologically fulfilling to push. It turns out that there are plentiful examples of buttons which do nothing and indeed other technologies which are purposefully designed to deceive us. But here's the really surprising thing. Many increasingly argue that we actually benefit from the illusion that we are in control of something – even when, from the observer's point of view, we're not.

In 2013, BBC News Magazine discovered that pedestrian crossings all over the UK were the wellspring of placebo buttons. A crossing in central London had programmed intervals for red and green lights, for example. Pushing the button would only impact the length of these intervals between midnight and 7am. ___ several other cities during busy periods, the crossings were programmed to alternate their signals at a specific rate. The buttons did nothing, but a "wait" light would still come on when they were pressed and, yes, people still pressed them presumably believing that their actions were having an effect.

Certain psychologists would argue that the buttons were indeed having an effect – just not ___ the traffic lights themselves. Instead the effect is in the commuter's minds. To understand this you have to go back to the early 1970s. At that time, psychologist Ellen Langer, now a professor ____ Harvard, was a Yale graduate student. During a five-card draw game of poker she dealt one set of cards in a haphazard order. "Everybody," she says, "got crazy. The cards somehow belonged to the other person even though you couldn't see any of them." Langer decided to find out more

11225354498 - Maria Vitória Gonçalves Vieira

about the way people regulated the playing of such games. She went to a casino where, at the slot machines, she found gamblers with elaborate ways of pulling the lever. At another time a "highly rational" fellow student tried to explain to her why tossing a pair of dice could be done in a certain way to affect the numbers which came up. "People believed that all of these behaviors were going to increase the probability of their winning," she comments.

In 1975, she wrote a paper where she described the significance of these beliefs and coined a term for the effect that they had on people: the "illusion of control". However, instead of framing this as an irrational delusion, Langer described the effect as a positive thing. "Feeling you have control over your world is a desirable state," she explains. When it comes to those deceptive traffic light buttons, Langer says there could be a whole host of reasons why the placebo effect might be counted as a good thing. "Doing something is better than doing nothing, so people believe," she says. "And when you go to press the button your attention is on the activity at hand. If I'm just standing at the corner, I may not even see the light change, or I might only catch the last part of the change, in which case I could put myself in danger."

Also, if pedestrians wait together at the crossing and a few press the button impatiently, that creates a sense of togetherness with strangers which might otherwise be absent. All of these things may be taken as positive impacts on our mental state, and even socially reinforcing. It's something to think about next time you cross the street.

(Source: Adapted from http://www.bbc.com/future/story/20150415-the-buttons-that-do-nothing)

Consider the sentence: "If I'm just standing at the corner, I may not even see the light change" (l.38), and the following statements:

I. It is an example of the first conditional.

II. The modal verb 'may' expresses possibility.

III. 'may' could be replaced by 'will' without causing any difference in meaning.

Which ones are INCORRECT?

A) Only I.

B) Only II.

C) Only III.

D) Only II and III.

E) I, II and III.

Which conditional below is not formed correctly and does not match the definition given? Choose the INCORRECT answer.

A) If I eat too much, I feel bad. (Zero Conditional)

B) If I'm late, she'll be angry. (1st Conditional)

C) If he had tried harder, he would have won. (2nd Conditional)

D) If he worked harder, he would do better. (2nd Conditional)

7 - (2018 - IDCAP - Prefeitura Municipal de Linhares (ES) - Professor - Inglês (Pref Linhares/ES))

Observe the paragraph below.

I almost certainly would have seen the movie on opening weekend even if I _____ a "civilian" who _____ the deluge of negative notices.The Unexpected Life Lesson I Learned from Moving to NYC – by Sarah Max. In three days, I'll be packing my bags to leave New York City for California. Now, to be clear, I am not a scorned ex-lover of the city, fed up with the noise, the stalled subways, or the stench of baking trash. I'm not running out of here in a huff, throwing my fist up at the bike messenger that side swiped me or the cab driver that laid on the horn as I crossed the street with a walk sign. I'm not even resentful of the things the city has demanded of me — and there have been some doozies. [...] (https://www.refinery29.co m/en-us/moving-to-nyc-highs-and- lows)

Choose the best option that completes the context.

A) [...] were – has read.
B) [...] was – had read.
C) [...] was – has read.
D) [...] were – has reading.
E) [...] were – had read.

8. (2018 - FURB - Prefeitura Municipal de Guabiruba (SC) - Professor ACT - Língua Inglesa (Pref Guabiruba/SC))

Mark the alternative which does NOT complete the sentence below correctly. If it rains, we _____ it.

A) mustn't go out
B) couldn't go out
C) can't go out
D) shouldn't go out
E) won't go out

ESSA LEI TODO MUNDO CONHECE:
PIRATARIA É CRIME.

Mas é sempre bom revisar o porquê e como você pode ser prejudicado com essa prática.

1. 

Professor investe seu tempo para elaborar os cursos e o site os coloca à venda.

2. 

Pirata divulga ilicitamente (grupos de rateio), utilizando-se do anonimato, nomes falsos ou laranjas (geralmente o pirata se anuncia como formador de "grupos solidários" de rateio que não visam lucro).

3. 

Pirata cria alunos fake praticando falsidade ideológica, comprando cursos do site em nome de pessoas aleatórias (usando nome, CPF, endereço e telefone de terceiros sem autorização).

4. 

Pirata compra, muitas vezes, clonando cartões de crédito (por vezes o sistema anti-fraude não consegue identificar o golpe a tempo).

5. 

Pirata fere os Termos de Uso, adultera as aulas e retira a identificação dos arquivos PDF (justamente porque a atividade é ilegal e ele não quer que seus fakes sejam identificados).

6. 

Pirata revende as aulas protegidas por direitos autorais, praticando concorrência desleal e em flagrante desrespeito à Lei de Direitos Autorais (Lei 9.610/98).

7. 

Concurseiro(a) desinformado participa de rateio, achando que nada disso está acontecendo e esperando se tornar servidor público para exigir o cumprimento das leis.

8. 

O professor que elaborou o curso não ganha nada, o site não recebe nada, e a pessoa que praticou todos os ilícitos anteriores (pirata) fica com o lucro.

Deixando de lado esse mar de sujeira, aproveitamos para agradecer a todos que adquirem os cursos honestamente e permitem que o site continue existindo.
